

LONGBALL KING HAMMERS THE COMPETITION

Who can hit a golf ball 100 yards longer than most PGA Tour Players? When Jack Hamm approaches the tee, few are prepared for what they're about to see. This guy, who looks more like a beach volleyball player than a golfer, approaches the ball with a rather unconventional stance-feet turned out, arm cocked awkwardly, but when this unusual swing uncoils, the power can be heard across the green. Jack Hamm is the World's Longest Driver with 6 world records, routinely soars his drives 400 yards. He's been banned from almost all driving ranges and has become a legend in Japan and he has become the Albert Einstein of sporting goods with his creative products and now he has outdone himself-Shaped Golf Technology!

Everyone knows what shaped skis did for skiers, it changed skiing forever! Now Shaped Golf Technology could do the same for your golf game. THE DAYS OF ROUND SHAFTS ARE OVER!

Jack now has invented the 1st shaped golf shaft and shaped golf head that could revolutionize golf technology.

This is the most radical change in golf since it went from wood to metal heads.

The 1st shaped golf shaft is shaped flat like a sword and it tears thru air like a knife. It's the 1st golf shaft with aerodynamic principles, and it makes too much sense. This could be worth 20 easy yards to the average golfer and it's scary what this could do to Jack Hamm's drives.

And because the 1st shaped shaft is flat, it doesn't twist like a round shaft as round shafts twist and spray the ball all over the place. This shaped shaft is DEAD STRAIGHT and will cure any slice!

Hamm says the most amazing thing about the flat shaped shaft, is it tracks and aligns the clubface right into the ball. It actually aligns the clubface for you and gives you the perfect path into the ball every time. It tracks like a heat seeking missile right into the ball.

This shaped shaft also has an intelligent flex point, so one shaft fits everyone and adjusts to each person's swing.

This could make the guys in your foursome jealous!

Hamm has also created the 1st shaped golf head to go with the shaped shaft. The 1st shaped golf head, literally inverts the shape of golf-flipping the traditional head shape upside down to enlarge the face creating the World's biggest sweet spot ever; 595mm of sweet spot. Almost twice a traditional head sweet spot. Hamm also added a vortex side profile to this design, creating a ski slope shape which as Hamm describes, "creates what is called push acceleration, like an aircraft wing, making this head the only driver to accelerate itself on the downswing, all by itself. The inverted ski slope create a vacuum pressure pocket behind the face, reducing drag

and creates a pocket for the head to slide right on through, accelerating the head on the downswing, all by itself.”

With the Advance Technology of the Shaped Shaft and Shaped Head, the club has to go faster thru the air and as Hamm says “If you can make the club go faster thru the air, the farther the ball goes period.”

With the size of face of the shaped golf head, average golfers can close their eyes and hit the sweet spot!

Every golfer is going to want to try this new Shaped Golf Technology. Sixty-year old golfers can now hit 300-yard drives and feel young again on the tee box. This Shaped Golf Technology is worth an easy 20 yards. Some golfers have reported up to 50 more yards. Even Jack’s toll free number is long 888-550-LONG. Jack’s website is www.xfactordirect.com.
